Curriculum Vitae

Name: Haochen Hou

Phone: +852 5988 3005 / +86 15935154248

Email: haochenhou@LN.hk / h383842447@outlook.com

Address: Parkview Villa, 1 Tuen On Lane, New Territories, Hong Kong

---

Professional Summary

Bachelor of Computer Science (Software Engineering) from Carleton University, Canada. Currently pursuing a Master of Science in Artificial Intelligence and Business Analytics at Lingnan University, Hong Kong. Solid foundation in full-stack development with proficiency in Java, Web development, and MySQL. Experienced in front-end and back-end development, system optimization, and software testing. Proficient in AI Agent, RAG, large model fine-tuning, and prompt engineering, as well as data analysis, mining, visualization, machine learning, and deep learning. Committed to building highly available, secure enterprise applications and implementing large models and data analytics in business scenarios.

Education

Bachelor of Computer Science (Software Engineering Stream)

Carleton University, Ottawa, ON, Canada

Relevant Coursework: Data Structures and Algorithms, Software Engineering, Database Systems, Web Development, Operating Systems, Object-Oriented Programming, Web Security

Master of Science in Artificial Intelligence and Business Analytics (GPA : 3.53 / 4)

Lingnan University, 8 Castle Peak Road, Tuen Mun, New Territories, Hong Kong

Sep 2025 – Jun 2026

Relevant Coursework: Core Machine Learning and Deep Learning, Image Analysis Network Architecture, Tableau Data Visualization, SQL / NoSQL Databases, Generative AI Prompt Engineering, Python Development, Large Model Fine-tuning, RAG, AI Agent, NLP & Transformer, Model Compression and Inference Optimization

---

Technical Skills

Programming Languages : Python, Java, JavaScript, SQL, C, C++

Frameworks & Tools :

- **Backend**: Spring Boot, Spring MVC, MyBatis, Spring Security, Maven, Docker
- **Frontend**: React.js, Vue.js, Bootstrap, Thymeleaf, AJAX, JQuery
- **Databases**: MySQL, PostgreSQL, MongoDB, Redis, Tableau, Database Optimization
- **Testing & DevOps**: JUnit, TDD, BDD, Selenium, Cucumber, Git

AI & Large Models :

- **Machine Learning**: Linear Regression / Classification, Unsupervised Learning, Decision Trees, Probabilistic Graphical Models, Kaggle Competition
- **Deep Learning**: CNN, RNN, GAN, Transformer, YOLO Object Detection, Semantic Segmentation, NLP, OCR, Speech Recognition
- **Large Model Technologies**: LLM, Prompt Engineering, LLM Fine-tuning, RAG, AI Agent
- **Engineering Optimization**: Model Quantization / Pruning / Distillation, Model Compression, High-Performance Inference, Model Deployment

---

Project Experience

Multiplayer Online Web Game (Freelance Project)

May 2023 – Jul 2023

Tech Stack: Spring Boot, Maven, JQuery, JSON, HTML, CSS, Bootstrap, JUnit Jupiter, Cucumber, Selenium

- Developed a real-time multiplayer online web game supporting 2–4 players, focusing on interactivity and real-time updates to enhance user engagement.
- Frontend: Built responsive UI with HTML, CSS, and Bootstrap; implemented asynchronous communication via AJAX and dynamic content updates with JQuery.
- Backend: Built game logic with Spring Boot and integrated WebSockets for real-time bidirectional communication to ensure consistent and timely data synchronization.

GaitGPT - AI-Powered Gait Analysis System

Jan 2026 – present, Github : GaitGPT/GaitGPT

Tech Stack: Python, LLM (Large Language Model), Prompt Engineering, RAG, FastAPI, Docker, Local TTS, RESTful API, UV, YAML/JSON

- Designed and developed a GPT-based intelligent gait analysis system targeting medical gait assessment scenarios, focusing on LLM-driven data interpretation and natural language interaction to enhance the usability of gait analysis for non-technical users (e.g., rehabilitation therapists).
- Prompt Engineering: Customized domain-specific prompt templates in the prompts directory to optimize LLM responses for gait anomaly detection and rehabilitation suggestion generation.
- Backend & Deployment: Developed an AI-powered gait analysis system that converts text or video into gait insights, supports research and clinical report generation, enables long-term memory storage, and builds an interactive chatbot with agent-based workflow control for intelligent gait assessment.

SRR Agentic Processor Intelligent Processing System (Part-time job)

Dec 2025 – Jan 2026, AMAIN ENGINEERING DEVELOPMENT LIMITED

Github : SRR-Project-Team/SRR-Agentic-Case-Processing-System: 🏗 Agentic Case processing system for Slope Risk Reports (Version 2) / HHC-1998/CDS522_PROJECT (Version 1)

Tech Stack: Python, LLM Fine-tuning, Prompt Engineering, RAG, AI Agent, Zero DB, PostgreSQL (pgvector), MySQL, Redis, Git, External API Integration

- Led core development of an enterprise-level AI intelligent processing system for engineering, enabling multi-source document parsing, intelligent task routing, and standardized output to support automated engineering data processing.
- Core Module: Built RAG pipeline integrating Zero DB and PostgreSQL vector databases; integrated external APIs for geographic, meteorological, and slope management data to improve retrieval accuracy and coverage.
- Agent Layer: Designed AI Agent scheduling logic to unify field extraction, content generation, and quality control; implemented self-repair mechanisms to improve output coverage and faithfulness.
- Data Layer: Constructed a three-tier memory system (task / case / domain) and optimized storage with Redis cache and MySQL to ensure high response efficiency and data traceability.

Additional Information

- **Languages**: English (Fluent), Mandarin (Fluent), Cantonese (Learning)
- **Interests**: Open-source contributor, skilled in LLMs, Agent, RAG, FT & data-driven analysis.
